

TACTICAL SPOTTER WITH MIL-CROSS RETICLE

Finding Out The Distance of an Object

1. Estimate the size of the target
2. Line up the object either horizontally or vertically in between the mil-lines
3. Count the number of mil-lines that the object occupies
4. See Charts

- What power are you currently viewing the object at?
- How many inches is the object?
- How many mils does the object occupy?

Example

1. Wolf in reticle is about 3 feet wide (or 36 inches)
2. After lining up the wolf in between the reticle lines, the wolf is 7 mils wide
3. Going to the chart I know that I'm viewing the object at 11x, the object is 36 inches wide and is 7 mils wide, the wolf is roughly 66 yards away.

$$\frac{\text{Height of target (yards)} \times 1000}{\text{Height of target (mil)} \times 2.16} = \text{Range (yards)}$$
